Assessing Attitudes Towards Tobacco Advertising in Winooski, VT

Azevedo K., Brown B., Chang E., Evangelista J., McDaniels I., Kuzina O., Patel A., Nugent K., Wilcke B., Carney J.
University of Vermont College of Medicine, Burlington, VT

Introduction

There are approximately 75,500 adult smokers in Vermont, making up about 15% of the state's adult population¹. These rates are relatively higher in low-income populations. Winooski, Vermont is vulnerable to high tobacco use rates given that 23.6% of Winooski residents live below the poverty line².

The majority of tobacco users begin in their youth³. Tobacco advertising, which has been shown to have a direct, dose-dependent association with tobacco use in youth³, is highly prevalent in stores in Winooski. In conjunction with the Winooski Coalition for a Safe and Peaceful Community (WCSPC), we assessed the attitudes toward tobacco advertising within the Winooski Community.

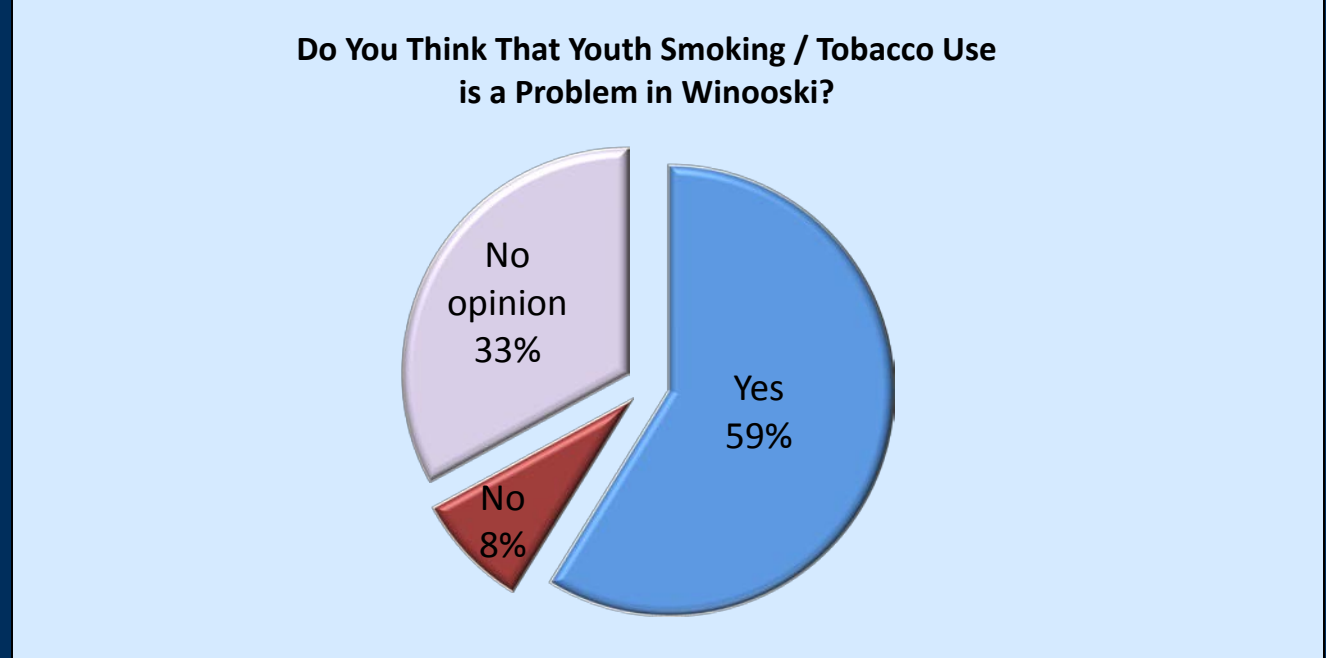

Objectives

- Initiate the *Small Changes, Big Impact*⁴ protocol
- Assess attitudes toward tobacco advertising and youth tobacco use in Winooski, VT
- Provide the WCSPC data for efforts to reduce tobacco advertising and use

Methods

- Designed a survey to assess the opinions of adult community members towards tobacco advertising and youth tobacco use in Winooski
- Administered the survey in three different settings:
 1. Sent home with students of the Winooski school district
 2. In-person at the parent-teacher conference at the Winooski school district
 3. In-person at the Winooski Community Health Fair
- Organized a free health fair at the Winooski Community Health Center

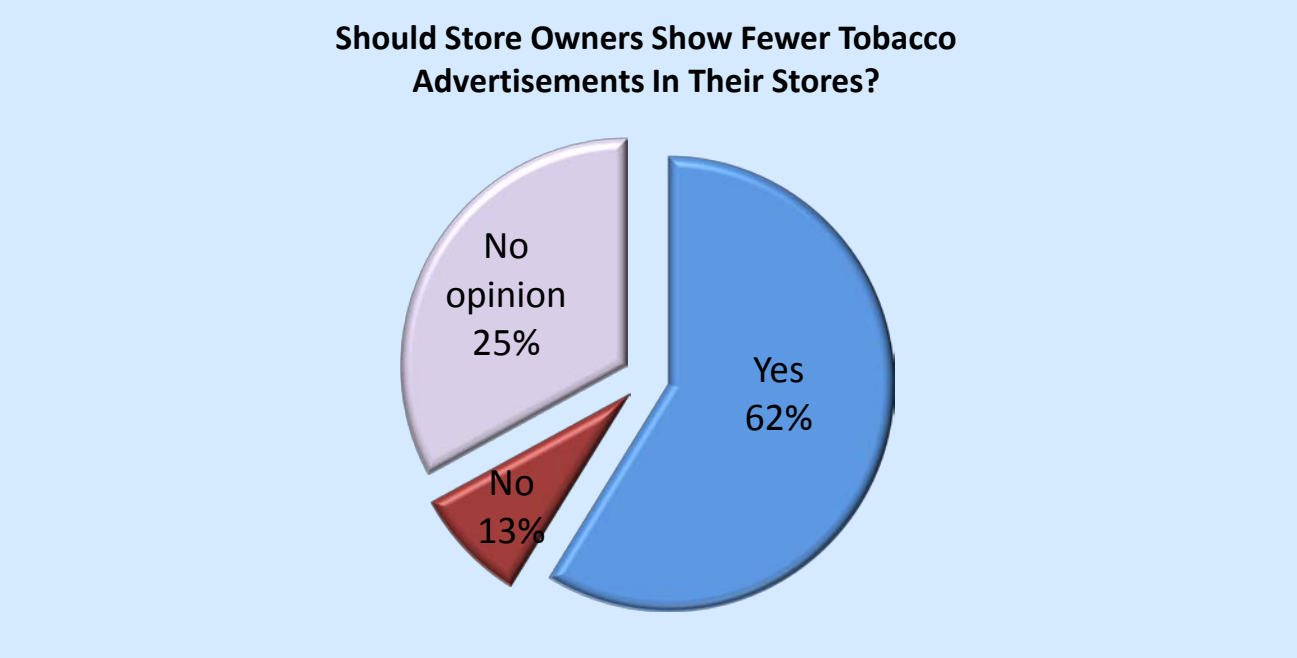

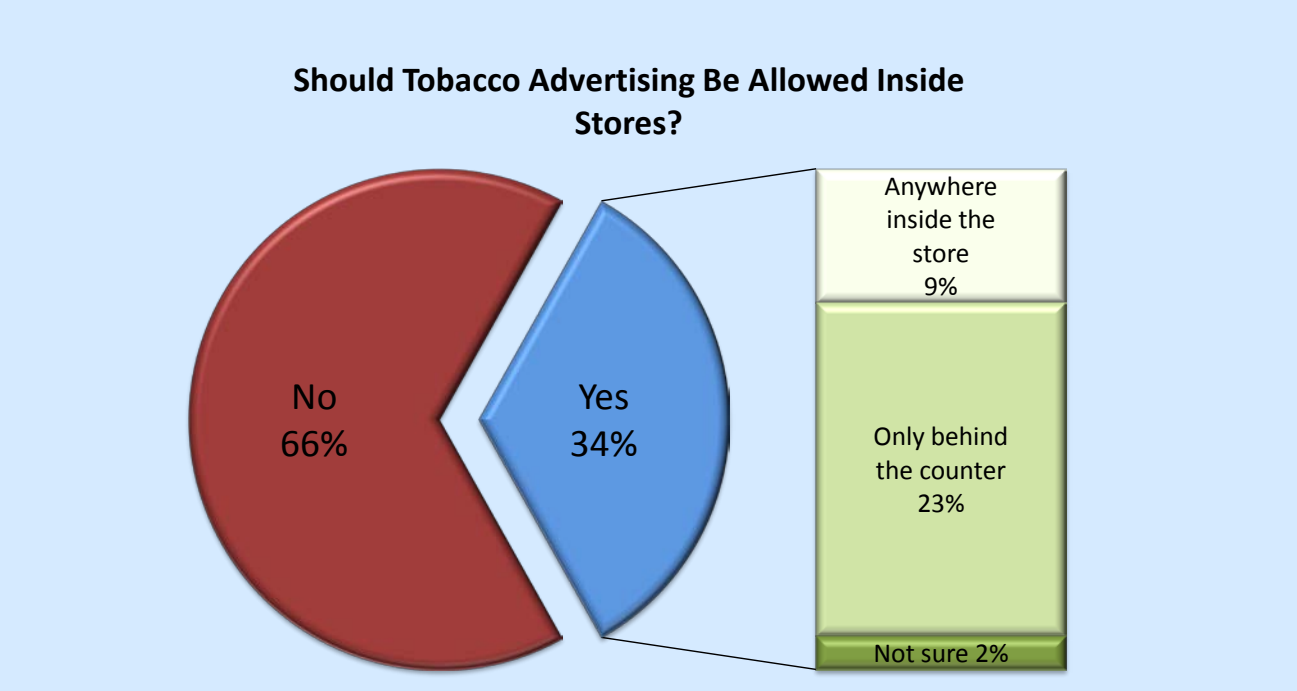

Results

- 18 % of respondents identified themselves as smokers.
- 59% of respondents thought that youth are influenced by tobacco advertising in stores.
- Respondents thought that grocery stores (77%), pharmacies (77%), corner stores (54%) and gas station/convenience stores (55%) should not post advertisements and signs for tobacco products.

	Nonsmokers	Smokers	Overall
Tobacco advertising should not be allowed inside stores	71%	29%	66%
Tobacco advertising should not be allowed outside stores	85%	65%	83%
Store owners should show fewer tobacco advertisements inside stores	63%	59%	62%
Youth smoking & tobacco use is a problem in Winooski	66%	29%	59%

- Respondents thought that grocery stores (66%), pharmacies (73%), corner stores (41%) and gas station/convenience stores (43%) should not sell tobacco products.
- 26% of respondents reported that they or other members of their family received advice from a doctor regarding tobacco products use in the past year.

Discussion

Youth exposed to tobacco advertising are more likely to smoke or use tobacco products³. The majority of respondents believe that youth smoking and tobacco use in Winooski is a problem and that store owners should decrease or eliminate tobacco advertising. This demonstration of community support for reduced tobacco advertising will be instrumental for achieving the goals of the *Small Changes, Big Impact*⁴ initiative in Winooski, VT.

Conclusion

- The majority of respondents believe that tobacco products should not be advertised anywhere inside or outside of stores.
- Both smokers and non-smokers think store owners should show fewer tobacco advertisements/displays in their stores.
- The majority of survey respondents think that grocery stores, pharmacies, corner stores, and gas station/convenience stores should not post advertisements and signs for tobacco products.
