

What is TeleHealth?

TeleHealth is the secure and private remote delivery of health care services using technology such as Ipads, iPhones, tablets and computers. For specific medical complaints, at site appointments can be replaced by video appointments between you and your provider over electronic devices

Survey of Patients at Brookfield Family Practice

“My TeleHealth appointment made it possible for me to be seen by a provider, and not take time off from work. I was able to have my medical concern taken care of during my lunch break, without having to spend the time and money traveling to the office.”

“I appreciate having the opportunity to be treated in my own home, and not have to worry about getting myself to the doctors when I am in pain.”

“On a day like today, when I can't see out of one eye due to pink eye, being treated over telemedicine is great. I am very satisfied with the explanation of what is being done for my medical concern.”
