

WHAT THE RESULTS MEAN

POSITIVE
One Line
Your product contains Fentanyl.

NEGATIVE
Two Lines
Your product **MAY** contain a different Fentanyl analogue that isn't coming up positive **OR** your product may not contain Fentanyl at all.

STAYING SAFE

- Start low, shoot slow
- Taste the shot before injecting the whole dose
- Don't use alone
- Don't get high at the same time, take turns
- Watch out for each other, carry Narcan, call 911

CALLING 911 IS SAFE: Vermont's Good Samaritan Law protects offenders from being arrested, prosecuted, or convicted for **any drug-related offense** if they call 911 in the event of an overdose.

HOW TO CHECK DRUGS FOR FENTANYL USING TEST STRIPS

1. Mix your drugs as usual in a clean cooker.
2. Draw into syringe, but do not shoot up yet.
3. Add sterile water to the cooker you just prepped in - mix well! ****Load your shot FIRST! Only test your rinse water!**
4. Dip the test strip in the water, in up to the first line & hold for 15 seconds
5. Place test strip on sterile surface or across top of cooker.

These Fentanyl test strips are provided for harm reduction use only. They cannot detect every Fentanyl analogue, nor can they detect other synthetic opiates. A negative test result does not mean a sample is safe to consume. No drug use is 100% safe. All drug use contains inherent risk.
