Annual Announcement

OF THE

MEDICAL DEPARTMENT

OF THE

University of Vermont

AND

State Agricultural College.

BURLINGTON, VT.,

FOR THE YEAR 1876.

BURLINGTON, VT.;

R. S. STYLES & SON, BOOK AND JOB PRINTERS.

1875.
Faculty of Medicine.

Matthew Henry Buckham, A. M., Burlington, Vt., President.

Samuel White Thayer, M. D., Burlington, Vt., Emeritus Professor of General and Special Anatomy.

Walter Carpenter, M. D., Burlington, Vt., Professor of the Theory and Practice of Medicine.

John Ordronaux, M. D., LL. D., New York City, Emeritus Professor of Medical Jurisprudence.

Peter Collier, Ph. D., M. D., Burlington, Vt., University Professor of Chemistry and Toxicology.

William Darling, A. M., M. D., F. R. C. S., New York City, Professor of General and Special Anatomy.

A. F. A. King, M. D., Washington, D. C., Professor of Obstetrics and Diseases of Women.

Henry D. Holton, M. D., Brattleboro, Vt., Professor of Materia Medica and General Pathology.

James L. Little, M. D., New York City, Professor of the Principles and Practice of Surgery.

---

Professors of Special Subjects.

D. B. St. John Roosa, A. M., M. D., New York City, Professor of Diseases of the Eye and Ear.

Edward S. Peck, A. M., M. D., Adjunct Professor of Diseases of the Eye and Ear.

Robert W. Taylor, M. D., New York City, Professor of Diseases of the Skin.

A. P. Grinnell, M. D., Burlington, Vt., Professor of Diseases of the Heart and Lungs.

Stephen M. Roberts, M. D., New York City, Professor of Diseases of Children.

---

Leroy M. Bingham, M. D., Burlington Vt., Demonstrator of Anatomy.

H. H. Atwater, M. D., Burlington, Vt., Instructor in Obstetrics and Diseases of Women.

D. S. Kellogg, A. M., M. D., Plattsburgh, N. Y., Charles P. Burns, M. D., Burlington, Vt., Assistants to the Chair of Surgery.

Henry W. Post, Assistant to the Chair of Physiology.

Henry H. Deane, Curator of Museum.

A. P. Grinnell, M. D., Dean.
The Faculty of the Medical Department of the University of Vermont, in issuing their Twenty-Third Circular and Catalogue, take pleasure in announcing the continued success and uninterrupted progress of the Institution under its present improved management.

The Medical College is situated near the University buildings, and upon an eminence overlooking the city of Burlington, Lake Champlain and the Adirondack chain of mountains. For beauty of scenery and salubrity of climate its situation is not surpassed by any Institution of learning in the country. The building is of brick, well ventilated, and provided with two commodious lecture-rooms and amphitheatre, two large, well-lighted dissecting-rooms, and in every way perfectly adapted for clinical and scholastic teaching. It contains a large museum, composed of a great number of Osteological and Vascular preparations, both wet and dry, and is open to the students during the session.

During the late vacation, the interior of the building has been completely renovated, the lecture-rooms painted, and the seats newly repaired; the Faculty having determined to spare no pains in contributing to the welfare and comfort of the students.

The College authorities also have the satisfaction of announcing the following change in the Faculty: Dr. J. L. Little who, for many years, has held the position as Lecturer on Operative Surgery and Surgical Dressings, in the College of Physicians and Surgeons of New York, and who is one of the Surgeons to St. Luke's and St. Vincent's Hospitals, in that city, and who so ably and satisfactorily discharged the duties of Professor of Surgery, during the past two sessions, has been elected to fill the chair of the Principles and Practice of Surgery in this Institution.

In order to render the course of instruction still more complete, four new Professorships on special subjects have been created by the Faculty since the close of the last session, which will afford the student a rare opportunity for gaining information from gentleman well known as recognized authorities in their particular departments, on subjects of great practical interest.

Dr. D. B. St. John Roosa, who has for many years occupied the chair of Diseases of the Eye and Ear, in the University of New York, will deliver a course of Lectures on Ophthalmology and Otology, during the College term.

Dr. R. W. Taylor, late Professor of Dermatology in the Woman's Medical College of New York, will deliver a course of Lectures on Diseases of the Skin.

Dr. S. M. Roberts, Professor of Diseases of Children, in the Woman's Medical College of New York, will deliver a course of Lectures on that subject.

Dr. A. P. Grinnell, who has recently been appointed Professor of Diseases of the Heart and Lungs, will give a thorough course of instruction in this department.
It is also expected that Dr. Geo. P. Fowler, of New York, who has been for several years the assistant of Dr. Jno. C. Dalton, Professor of Physiology in the College of Physicians and Surgeons of that City, will deliver, during the regular term, a course of Lectures on the Microscopical and Chemical examination of the Urine in health and disease.

These lectures will be illustrated by microscopical and chemical examinations, so that the student will become thoroughly familiar with the character of abnormal urine and the various indications for the treatment of urinary diseases.

---

**GENERAL OUTLINE OF THE COURSE OF LECTURES.**

**Practice of Medicine.**

PROF. WALTER CARPENTER.

The course of instruction in this department will be thorough, and such as will enable the student to become acquainted with the pathology and treatment of special diseases, and supply him with the necessary knowledge to observe the phenomena of disease. The Lectures will be illustrated with morbid specimens and casts.

**Chemistry and Toxicology.**

PROF. PETER COLLIER.

The lectures in this department relate to the fundamental doctrines of chemistry, or chemical philosophy, to inorganic substances, and to the chemistry of the vegetable and animal kingdoms. Toxicology, or the science of Poisons, a subject of the greatest importance to the practitioner, both in its pathological and medico-legal relations, receives special consideration. In connection with this course a chemical laboratory is established, in which students who desire it are instructed in analytical chemistry, and particularly in the examination of the various organs, secretions and excretions of the human body. Students are taught the more simple and accurate methods of making analyses of the blood, milk, urine, etc., with particular reference to their duties as medical practitioners.

**General, Descriptive and Surgical Anatomy.**

PROF. WILLIAM DARLING.

As a teacher in this department, Prof. Darling has no superior, as those who have listened to his lectures in both the Universities of Vermont and New York can testify. He is the only person in this country who is a fellow of the Royal College of Surgeons, England, by examination. His lectures will be illustrated by demonstrations upon the cadaver, as well as by plates and diagrams. For the acquisition, therefore, of a thorough and practical knowledge of Anatomy, this Institution offers the student superior advantages.
Obstetrics and Diseases of Women.

PROF. A. F. A. KING.

Prof. King holds the same chair in the Columbian University, at Washington, D. C., and is one of the attending Physicians to Providence Hospital in that city.

This course will comprise a series of lectures on the Science and Practice of Midwifery, together with additional lectures on Gynecology. The lectures on Obstetrics will be illustrated by an elaborate collection of life-sized diagrams, together with natural preparations and *papier maché* models, exhibiting the anatomy and physiology of reproduction in all its stages. The mechanism and practical management of natural and preternatural labors will be demonstrated on appropriate manikins, and obstetrical instruments of all kinds will be exhibited and their uses fully explained.

The department of Gynecology, which has of late obtained so great a prominence in medical practice, will be thoroughly taught, both as regard theory and practice, and all instrumental and other appliances required in treating the Diseases of Females will be presented. A complete assortment of instruments and a new collection of colored diagrams will form an attractive feature in this department that has hitherto been presented.

Materia Medica and General Pathology.

PROF. HENRY D. HOLTON.

In this department, especial attention will be paid to the physiological effects, and the therapeutical adaptation of remedies, with particular reference to their *practical* application, amply illustrated by experiments on living animals. Pathological specimens, both wet and dry, will also be used in illustration of different pathological conditions.

Physiology and Microscopic Anatomy.

PROF. M. CALKINS.

The lectures in this department will be illustrated, as far as possible, by experiments on animals, the use of the stereopticon, and microscopes, in order to exhibit to the student their more important facts and principles; more especially will the general functions of human physiology receive attention, and the relations of normal and abnormal life be described. Histological illustrations will be ample, as several excellent microscopes will be furnished for the more full elucidation of this branch of study.

Principles and Practice of Surgery.

PROF. J. L. LITTLE.

The Lectures on the Principles and Practice of Surgery will be both scholastic and clinical. All the important surgical operations will be performed on the dead body, and the use of surgical instruments and appliances will be demonstrated to the class. These lectures will be illustrated by a fine collection of plates, diagrams, and models. A Clinique will be held every Saturday, during the surgical course, when every facility will be afforded to the class for witnessing all necessary surgical operations.
Lectures on Special Subjects.

The Faculty being desirous of extending to the students every facility for the study of special departments of medicine, have established the following special courses, which will be extended hereafter, and it is believed, that with this addition to the regular curriculum, the advantages thus afforded by this college are unsurpassed by any medical institution outside of our large cities.

Diseases of the Eye and Ear.

Dr. D. B. St. John Roosa, Professor of Diseases of the Eye and Ear, in the University of New York, and author of the work on diseases of the Ear, which bears his name, has kindly consented to fill this chair, until Dr. Peck's return from Europe. He will deliver a course of lectures, thoroughly illustrated, and hold a clinic three times a week during his course, so that the student will be able to witness many of the important operations in this department.

Diseases of the Skin.

Prof. Robt. W. Taylor, one of the Physicians to Charity Hospital, N. York, whose labors in this department of medicine are well known to the Profession, will deliver a course of lectures on this subject, illustrated by plates, diagrams, and microscopic specimens. He will also hold several clinics; thus, giving the students an opportunity of becoming familiar with the latest views on the subject of dermatology.

Diseases of Children.

Prof. Stephen M. Roberts will deliver a course of lectures on Diseases of Infancy and Childhood, a department of study, generally either completely ignored, or but very superficially treated, although of the utmost importance to the practising physician.

Diseases of the Heart and Lungs.

Prof. A. P. Grinnell will give instruction in this department. A knowledge of auscultation and percussion, and of cardiac and pulmonary affections, constituting one of the most necessary elements in the acquirements of the practitioner, will be taught in the most practical manner, so as to render the student every facility for becoming expert in the diagnosis of thoracic diseases.

Cliniques.

The following Cliniques will be held within the College building during the regular term. Patients presenting themselves at these Cliniques, for advice and treatment, are examined, and the peculiarities of each case explained, the appropriate treatment prescribed, and the requisite surgical operations performed before the class.

A Surgical Clinique will be held by Prof. Little every Saturday morning, from 9 to 12 o'clock, during the last half of the session. A large number of surgical operations are performed at these Cliniques.

A Medical Clinique will be held by Prof. Carpenter on Wednesday morning, during the first half of the term.
A Clinique for Diseases of the Eye and Ear, by Prof. Roosa, will be held three times a week during his course of Lectures.

A Clinique for Diseases of the Skin, by Prof. Taylor, will be held two or three times a week during Prof. Taylor's course of Lectures.

A Clinique for Diseases of Children will be held by Prof. Roberts. Due notice of the time of holding the above Cliniques will be given.

Preliminary Term to Session of 1876.

Recitations and Lectures.

A Preliminary Course of Lectures and Recitations on the Principles and Practice of Medicine, Surgery, Anatomy, Obstetrics, Diseases of Women, Physiology and their auxiliary branches, will be given, consisting of two terms, commencing on the second Thursday in September, 1875, and continuing until March first, 1876. Opportunity will be afforded for private dissection, commencing on the second Thursday in December. Material for dissection will be furnished at cost. Daily demonstrations will be made by the Instructor in Anatomy. The fees of the above Course will be $40 a term.

Corps of Instructors.

Prof. W. Carpenter. Theory and Practice, Materia Medica, and General Pathology.

Prof. P. Collier. Analytical Chemistry and Toxicology.

Prof. A. P. Grinnell. General Surgery, and Physiology.

Dr. H. H. Atwater. Obstetrics, and Diseases of Women and Children.

Dr. L. M. Bingham. General and Special Anatomy and Histology.

Regular Term.

The regular winter course of lectures, for the Session of 1876, will commence on the second Thursday of March, and will continue sixteen weeks. This Course will consist of from five to six Lectures daily in the various Departments of Medicine and Surgery.

Fees for the Regular Session.

Matriculation Fee, Payable each Term, .................. $5.00

Fees for the full Course of Lectures by all the Professors .......................... 70.00

Graduation Fee ........................................ 25.00

Material for dissection will be furnished at cost.
The tickets are to be taken out at the beginning of the Session.
Students who have already attended two full courses of lectures in other regular schools, are admitted on paying the matriculation fee and $25.
Students who have attended two full courses in this College, or who, having attended one full course in some regularly established medical school, and one full course in this College, are admitted to a third course of lectures on paying the matriculation fee only.

Graduates of this school are admitted without fee. Graduates of other regular schools, and Theological Students, are admitted on general ticket, by paying the matriculation fee.

Requirements for Graduation.

Candidates for the degree of Doctor of Medicine must have attended two full courses of Lectures—the latter in this College. They must have studied medicine three years, under the direction of a regular physician or surgeon, and have attained the age of twenty-one years. Each candidate is required to write a medical thesis, and to deposit it, together with his graduation fee, with the Dean of the Faculty, one month before the close of the Session. Full certificates of the time of study, of age, and of moral character, must also be furnished. They must also pass a satisfactory examination before the Medical Faculty, and Board of Medical Examiners appointed by the State Medical Society.

Two full courses of Lectures are absolutely required, and no period of practice will be taken as an equivalent for one course.

To prevent any misunderstanding with regard to the requirements for graduation, the Faculty desires to state that the only Courses of Lectures recognized, are those taken at Medical Colleges, recognized by the American Medical Association. The Tickets, Diplomas of Eclectic, Homeopathic, or Botanic Colleges, or Colleges devoted to any special system of medicine, are considered irregular, and will not be recognized under any circumstances. Certificates from preceptors, who practice any peculiar system of Medicine, or who advertise, or violate in any way the Code of Ethics adopted by the Profession, will not be received, under any circumstances, even if the preceptors be regular graduates in medicine.

Graduates of other regular Colleges, who desire a degree from this institution, must pass a satisfactory examination in the branches of Medicine, Surgery and Obstetrics; and if they be graduates of more than three years standing, they must exhibit a certificate of membership in some Medical Society, entitled to representation in the American Medical Association. They will be required to pay the matriculation and the graduation fee. No thesis is required.

Letters requiring information should be directed Prof. A. P. Grinnell, Dean of the Faculty.

Students are requested, on their arrival in the City, to call at the office of A. P. Grinnell, and register their names, and they can at the same time obtain all necessary information and assistance.

Board.—Board may be obtained from $4 to $6 per week. Good accommodations furnished students who wish to board themselves. Many adopt this method, at a great reduction of expense. Students who intend to board themselves will find it to their advantage to come provided with such bedding and culinary articles as they can conveniently bring with them from home.
PRIZES.

Faculty Prize: A Prize of twenty-five dollars will be awarded by the Faculty for the best Graduating Thesis. All Theses competing for this prize must be handed in one month before the close of the season.

Prof. Little will give a prize for the best examination in Surgery.

Prof. Holton will give a prize for the best examination in Materia Medica and General Pathology.

Prof. Carpenter will give a prize for the best Essay on any subject connected with practical medicine.

Prof. Calkins will give a prize to the student who passes the best examination on his Lectures on Physiology.

Prof. King will give a prize for the best examination in Obstetrics.

AWARD OF PRIZES.

The following were the Prizes awarded at the Commencement held July 1st, 1875, in accordance with the terms announced in the Catalogue of 1875:

The Faculty Prize of $25, for the best Graduating Thesis, was awarded to Payson M. Chadwick, of Vermont, for a Thesis on The Histological Nature of Inflammation.

Honorable mention was also made of the following Theses:
- A Thesis on Diphtheria, by James O'Reilley, of New York.

The Prize of a Stethoscope, offered by Prof. Carpenter, was awarded to Eugene H. Townsend, of Burlington, Vt., for Essay on Scarlatina.

The Prize of a case of Surgical Instruments, offered by Prof. Little, for the best report of his lectures, was awarded to W. P. Swett, of Fairfax, Vt.

Honorable mention was made of the report offered by Philip H. Patten, of Franklin, Vt.

The Prize of a copy of Velveau's Operative Surgery, 4 vols., offered by Prof. Calkins for the best written report of his Lectures on Physiology, was awarded to Wm. E. Forest, B. S., Winooski, Vt.

Honorable mention, also, was made of the report of S. E. Root, A. M., of Newton, Mass.

The Prize of a Hypodermic and Thermometer Case, offered by Prof. Holton, for the best examination in Materia Medica, was awarded to Merritt S. Ferguson, of Burlington, Vt.
TEXT BOOKS, AND WORKS OF REFERENCE.

On Physiology: Dalton's Human Physiology; Carpenter's Principles of Human Physiology; Flint's.
On Chemistry: Fowne's, (Revised); Barker's; Bowman's Medical Chemistry.
On Theory and Practice: Flint, Tanner, Watson, Aiken, Reynolds, Neimeyer, Delafield's Post Mortem Examinations; Williams' Principles of Medicine.
On Obstetrics: Leishman; Bedford; or Cassaux.
On Diseases of Women: Thomas, or Barnes.
On Materia Medica: Biddle's; Waring's Practical Therapeutics; Ringer's Therapeutics; U. S. Dispensatory.
On Diseases of the Eye and Ear: Roosa, on Disease of the Ear; Lawson, on Disease of the Eye; Stellwag, on Disease of the Eye.
On Medical Jurisprudence: Ordronaux.
On Diseases of Children: Steiner; Smith; West.
On Diseases of the Skin: Fox; Hebra and Rapah.

The work first named, on each subject, is preferred.

To the State Medical Society of Vermont.

Your delegates to the Medical Department of the University of Vermont would respectfully report that they were present at the examination of the candidates for the Degree of "Doctor of Medicine," which was held at the College, in Burlington, on the 29th and 30th days of June, 1875. We gratefully acknowledge the courteous attention shown us by the Faculty of the College, and the ample facilities placed at our disposal to enable us to measure accurately the abilities and professional attainments of candidates for graduation.

The demand, made within a few years past by Medical Associations, and endorsed by the most intelligent members of the medical profession,—and in some instances by the people through their legislators,—that none but well-educated persons shall be admitted to practice medicine, is now being endorsed also by the medical schools of the country, which practically declare, "We graduate such as the profession and the public demand."

The class of graduates, of the present year, in the Medical Department of Vermont University, is larger than usual, numbering about thirty, nearly all of whom are young men of culture, intelligence and energy, who will earn a good reputation in their several fields of Medical and Surgical practice.

But this College, in common with others, labors under a misfortune which it cannot yet remedy, and for which it is not wholly responsible. Whoever listens to, or makes examinations of, candidates for graduation, will find that in some instances good seed has been sown where the soil has been imperfectly fitted, or where the soil is by nature ill-adapted; and although it may promise well for a season, it will wither, or become choked with other things, and yield imperfect fruit.

Deficient preliminary education is a cog that will cling to and retard the progress of the most assiduous student, while a mistake in respect to natural fitness is fatal to success. These should be prevented not only before admission to medical lectures, but even before one commences study in the office of his preceptor, by advice in regard to both.

It is hoped that the time will soon come when all medical schools will require preliminary examinations as tests of preparation to enter upon the study of medicine and surgery.

We are well satisfied that the course of instruction in the several departments of this institution is complete, practical, and thorough, as compared with other medical schools within our knowledge; that its present able Board of Professors and assistants, its increasing advantage, regard to clinical teaching, and lectures upon special departments of medicine, combine to render it worthy of the respect and confidence of the Society and of the profession throughout the State, as well as elsewhere.

Most respectfully,

O. F. FASSETT, M. D., Delegate.

TREASURER,
LEROY M. BINGHAM, M. D., Burlington, Vt.

EXECUTIVE COMMITTEE,
P. J. KENT
D. S. KELLOGG
A. D. TAGERT

Every graduate of the Medical Department of the U. V. M., and Alumni of the Academical Department who have graduated in medicine elsewhere, in good and regular standing, are considered members of this Association.

The Annual Meeting of the Association will be held on Tuesday afternoon of Commencement week, when an address will be delivered by the President.

As it is necessary that a complete register of the Alumni be procured, in order that members may be notified of the meetings, graduates are particularly requested to forward to the Secretary of the Association their own name in full, present location, honors received or positions of trust occupied, &c., &c. Also, information concerning other graduates of our School, deaths, and all other facts of interest to their classmates or the College.
