The HPV Vaccine

Do I really need it?

It's Effective!

Three doses over the course of 6 months provides protection from four important strains of HPV - two that can cause cancer and two associated with genital warts

It's Necessary!

HPV is very common, and there is a high chance you will be exposed at some point during your lifetime. By receiving the vaccine, you are also less likely to transmit a potentially dangerous infection to your partners

It's Safe!

Vaccines go through many tests before they're approved for the general public, and the HPV vaccine has been proven safe in many clinical trials

It's Recommended!

It's not often a few simple shots can prevent cancer. We recommend the HPV Vaccine to all our patients
